Investment Objective and Policy

The Fund's investment objective is to generate capital growth whilst exhibiting low correlation to equity markets over a rolling three year period.

The Fund intends to achieve its objective by actively managing direct and indirect exposure globally without limitation, to fixed income securities, collective investment schemes, cash and cash equivalents, equities and FX, as well as indirect exposure to commodities. For the avoidance of doubt, the Fund will not invest directly in commodities.

The Fund will not be subject to any geographic, sector or market capitalisation constraints.

The Fund may invest in financial derivative instruments ("FDI")s (i) for investment purposes, (ii) to attempt to hedge some of its investment risk, or (iii) for the purposes of efficient portfolio management. The Fund's use of FDI may introduce leverage into the Fund, the risk of which is discussed under FDI and Leverage Risk below.

For full details please refer to the Investment Objective, Investment Policy and Investment Restrictions of the prospectus and supplement of the Fund. The Class FP shares of the Fund are accumulation Shares and do not carry a right to dividend. Class FP Shares are available in EUR, GBP JPY, and USD.

You can buy or sell shares on demand every Business Day subject to the relevant terms set out in the supplement of the Fund and the prospectus.

Recommendation: This fund may not be appropriate for investors who plan to withdraw their money within 3 years.

Risk and Reward Profile

The Fund is categorised as a 3 due to the nature of its investments which may cause the price of shares to fluctuate moderately.

The risk indicator was calculated using simulated data and may not be a reliable indicator of the future risk profile of the Fund. The risk category shown is not guaranteed and may change over time. The lowest category does not mean 'risk free'.

The Fund is exposed to additional risks not captured by the risk indicator including, without limitation:

- FDI and Leverage Risk—FDI may fluctuate in value rapidly and certain FDI may introduce leverage, which may result in losses that are greater than the original amount invested.
- Operational risk—human error, system and/or process failures, inadequate procedures or controls may cause losses to the Fund.

- The performance of the underlying(s);
- Interest rate risk: The present value of any future returns from an investment varies inversely with the prevailing level of interest rates
- Credit Spread (i.e. an improvement or deterioration in the perceived credit quality of an issuer by the financial market);
- Implied volatility which is a financial market measure of the perceived prevailing risk in an underlying i.e. the higher the implied volatility of an underlying the greater the perceived risk that an underlying price may change significantly, positively or negatively.

For full details of the relevant risks reference should be made to the risk factors sections of the prospectus and supplement.

The Fund may construct strategies using FDI that are long-only, short-only or combinations of long and short by investing indirectly in the underlying assets.

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distribution. These charges reduce the potential growth of your investment.
